

IMPORT EXPORT

Import Export For Magento 2

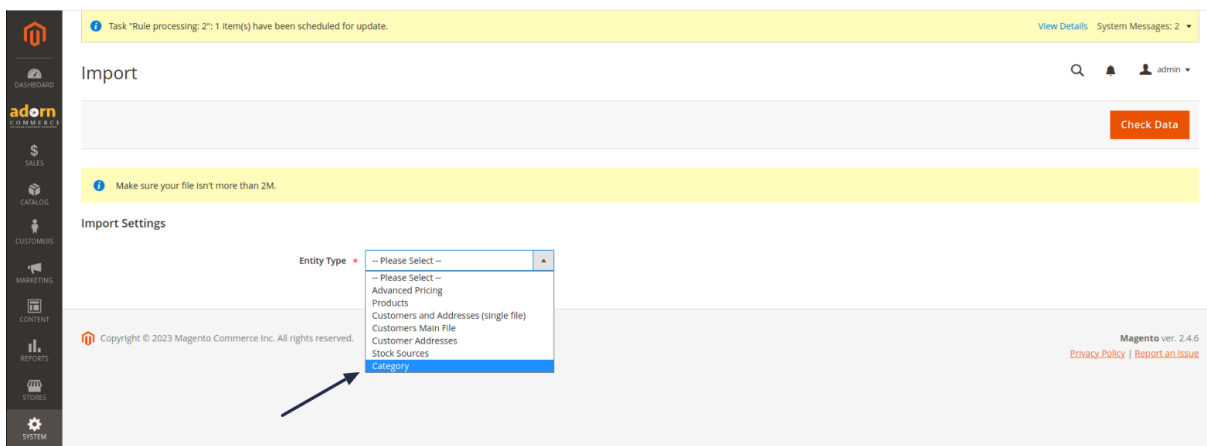

User Guide

Import Categories:

How to Import Category : Login to the Magento Admin, Choose System > Import

In the Import Settings section, select Entity Type = “Category” and click **Download Sample File** to download the file.

We support the imported file type as CSV.

Edit the information you want to import in the template file.

id	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y			
1	is_root_c	store_id	parent	is_active	include	name	description	landing_display	is_anchor	available	default	sfilter	price	url	key	meta_title	meta_key	meta_description	product	custom_position	page_layout	custom_content	custom_content	custom_content				
2	1	0	1	1	1	Test Cate	<h3>Hello</h3><	2	PRODU	1	position,	position	55.55	Jamacia	Meta	Titl	Meta	Meta	Des	24-WB07	1	2	2column:####	####	0			
3		0	1	1	1	Test Cate	<p>Testing</h1>		PRODU	1	price	88.88	tiger	eye	Meta	Titl	Meta	Key	Meta	Description	3	2	2column:####	####	0			

Configure Import Behavior:

Set Import Behavior to one of the following:

- Add/Update
- Replace
- Delete

To determine what happens when an error is encountered when importing data, choose one of the following:

- Stop on Error
- Skip error entries

For **Allowed Errors Count**, enter the number of errors that can occur before the import is cancelled. **(The default value is 10)**

Accept the default value of a comma (,) for **Field separator**.

Accept the default value of a comma (,) for **Multiple value separators**.

In a CSV file, a comma is the default separator. To use a different character, make sure that the data in the CSV file matches the character that you specify.

Accept the default value `_EMPTY_VALUE_` for **Empty attribute value constant**.

If you want to enclose any special characters that might be found in the data as an escape sequence, select the **Fields Enclosure** checkbox.

Identify the import file:

Click Choose File to **select the file to import**.

Find the CSV file that you prepared to import and click Open.

Check the import data:

In the upper-right corner, click Check Data.

Wait a few moments for the validation process to complete.

If the import data is valid, the following message appears:

Success message - file is valid

File to Import

Select File to Import catalog_category.csv
File must be saved in UTF-8 encoding for proper import

Images File Directory

For Type "Local Server" use relative path to <Magento root directory>/var/import/images, e.g. product_images, import_images/batch1.
For example, in case product_images, files should be placed into <Magento root directory>/var/import/images/product_images folder.
If remote storage is enabled, in case product_images, files should be placed into <Remote Storage>/var/import/images/product_images folder.

Validation Results

 Checked rows: 4, checked entities: 4, invalid rows: 0, total errors: 0

 File is valid! To start import process press "Import" button

If the file is valid, click Import.

Otherwise, correct each problem with the data that is listed in the message, and try to import the file again.

The import process continues to the end of the data, unless an error is encountered.

If an error message appears in the Validation Results, correct the problem in the data and import the file again.

An error message appears when the import is complete.

Export Categories:

In the Export Settings section, select Entity Type = **Category** Export to start exporting your categories.

Set the file format when exporting at Export File Format, select **CSV**.

Fields enclosure: Click the checkbox to enclose the value in the column. The default value is apostrophe (")

After completing step 1, the Entity Attributes section will appear, listing all the properties available in alphabetical order.

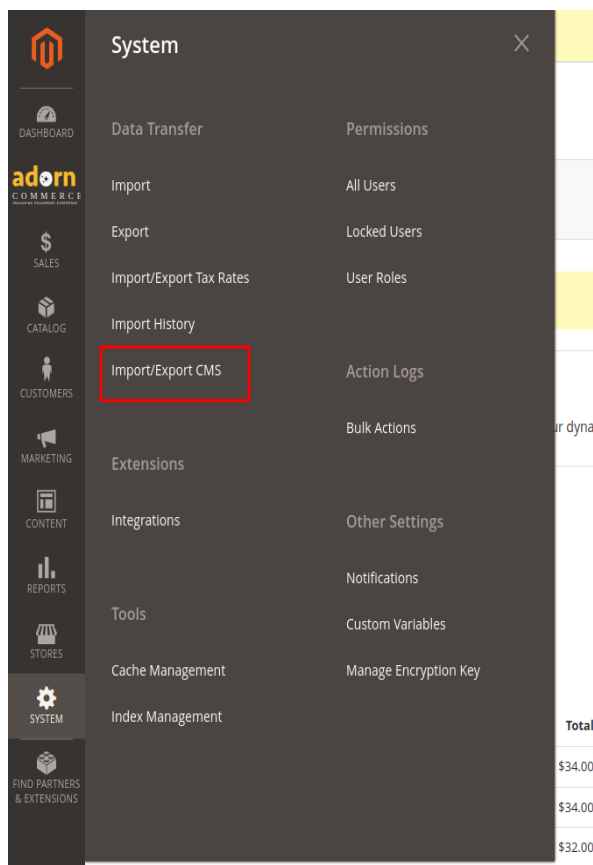

To search for categories by category or category codes, enter the label/code in the Attribute Label/Attribute Code then click the Search button.

To export only records with specific attribute values, enter the value in the Filter column.

To not export properties, click the checkbox in the Exclude column.

Import/Export CMS Pages and Block:

For Import/Export CMS Go To **System > Import/Export CMS**

You can see this screen

Import/Export CMS

Export CMS Pages Export Static Blocks Import

General

Import Here No file chosen

[Download Sample CSV File\(CMS Block\)](#)

[Download Sample CSV File\(CMS Page\)](#)

Select Import Type -- Please Select --

Import Mode

Import Mode -- Please Select --

Import Here: Upload CSV file for import CMS Pages/Block.

Download Sample CSV File(CMS Block): Download Sample CMS Block CSV file.

Download Sample CSV File(CMS Page): Download Sample CMS Page CSV file.

Select Import Type: There are 2 types of Import type

1. Import Blocks
2. Import Pages

Here you can select the import type which you want to import data.

Import Mode:

Overwrite existing: If a page/block with same id and store assignment is found, it will be overwritten by the CSV file content.

Skip existing: If a page/block with same id and store assignment is found, it will NOT be overwritten by the CSV file content.

Then click on the **Import** Button in Right upper corner.

For Export the CMS Page and Block you can see 2 buttons in the Upper Right Corner.

1. **Export CMS Pages:** For Export Pages.
2. **Export CMS Block:** For Export Block.
